Basic Code Analysis: Resolving Spring Bean Creation Failures

Duration : 30 Min.

Scenario

A Spring app crashes with 'NoSuchBeanDefinitionException' for UserService. Inspect class decorators and configure annotations.

Target File Location & Creation

File to Create/Update: `student_workspace/solution.json` **Input Resource File to Inspect**: `student_workspace/spring_di.log`

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Add missing '@Service' annotation to 'UserService.java' to register it inside Spring's context.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect `spring_di.log` inside `student_workspace/`.
3. Open `solution.json` in `student_workspace/` and perform the required modifications.
4. Save your changes (`Ctrl + S` or `Cmd + S`).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Test Case	Requirement	Marks
TC1	UserService.java exists and is syntax-valid	3 Marks
TC2	@Service or @Component annotation added	4 Marks

TC3	@Autowired or constructor injection configured correctly	3 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
