Basic Code Analysis: Repairing Maven Dependency Conflict Warnings

Duration : 45 Min.

Scenario

A Java application crashes at boot with a NoSuchMethodError due to duplicate Jackson core dependencies. Exclude duplicate library dependencies inside pom.xml.

Target File Location & Creation

File to Create/Update: `student_workspace/pom.xml` **Input Resource File to Inspect**: `student_workspace/pom.xml`

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Edit 'pom.xml' to add exclusions under the conflicting dependency block.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect `pom.xml` inside `student_workspace/`.
3. Open `pom.xml` in `student_workspace/` and perform the required modifications.
4. Save your changes (`Ctrl + S` or `Cmd + S`).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Test Case	Requirement	Marks
TC1	pom.xml contains valid XML	3 Marks
TC2	Conflicting jackson library correctly excluded	3 Marks

TC3	Correct exclusion schema syntax used	2 Marks
TC4	Main dependencies remain intact	2 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
