Basic Code Analysis: Configuring Spring Profiles in YAML format

Duration : 45 Min.

Scenario

A deployment workflow fails to activate the production credentials because of dynamic profile property resolving issues in application.yml.

Target File Location & Creation

File to Create/Update: `student_workspace/application.yml` **Input Resource File to Inspect**: `student_workspace/application.yml`

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Configure Spring Boot multi-profile configuration settings in 'application.yml'.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect `application.yml` inside `student_workspace/`.
3. Open `application.yml` in `student_workspace/` and perform the required modifications.
4. Save your changes (`Ctrl + S` or `Cmd + S`).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Test Case	Requirement	Marks
TC1	application.yml has valid YAML structure	3 Marks
TC2	spring.profiles.active variable configured correctly	3 Marks

TC3	Different properties defined under 'prod' divider blocks	2 Marks
TC4	Correct indentation spacing in configuration nodes	2 Marks

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
