Java Lab: Spring Cloud Config Server Integration

Duration : 60 Min.

Scenario

Configure a centralized config client to fetch property structures from a Git-backed Config Server.

Task Objectives

Perform the following actions inside the `student_workspace` directory: 1. Locate `src/main/resources/bootstrap.yml`. 2. Configure config client properties to point to config server URL `http://localhost:8888` and fetch application overrides: `spring.cloud.config.uri=http://localhost:8888` `spring.cloud.config.name=ops-app`

Verification

Once you have performed the tasks, you can run the verification script to check your progress and receive your score.

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
**TC1	config client settings configured	3 Marks
**TC2	config server URI mapped	3 Marks
**TC3	spring.cloud.config.label is master/main	3 Marks
**TC4	config profile set	3 Marks
**TC5	Config bootstrap syntax valid	3 Marks
**TC6	Config server loaded	3 Marks
**TC7	Central property repo active	3 Marks
**TC8	Dynamic configs active	4 Marks

Total Score: 25 Marks
