Java Lab: JBoss / WildFly Standalone App Server Deployment

Duration : 60 Min.

Scenario

Configure standalone server listener port bindings inside WildFly configuration directories.

Task Objectives

Perform the following actions inside the `student_workspace` directory: 1. Locate `configuration/standalone.xml`. 2. Configure the HTTP socket binding port setting to offset default port listening parameters from `8080` to `8082`: `<socket-binding name="http" port="8082"/>`

Verification

Once you have performed the tasks, you can run the verification script to check your progress and receive your score.

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
**TC1	standalone WildFly mode check	3 Marks
**TC2	custom port offset set to 2	3 Marks
**TC3	standalone.xml XML matches	3 Marks
**TC4	HTTP port bound to 8082	3 Marks
**TC5	deployment.properties exists	3 Marks
**TC6	Active deployment scanner properties	3 Marks
**TC7	Standalone deployment scanner configured	3 Marks
**TC8	App deployment listener running	4 Marks

Total Score: 25 Marks
