Log Analysis: Integrated Log Investigation Workshop (End-to-End Incident Triage)

Duration : 90 Min.

Scenario

A major production outage affected the payment gateway. Correlate Linux auth/syslog logs, Java Spring stack traces, Splunk search results, and correlation IDs to perform root cause analysis and generate a structured incident report.

Target File Location & Creation

File to Create/Update: `student_workspace/solution.json` **Input Resource File to Inspect**: `student_workspace/outage_trace.log`

Task Objectives

Perform the following actions inside the `student_workspace` directory: - Inspect `outage_trace.log` in `student_workspace/`. - Edit `solution.json` and record the required log analytics or findings.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect `outage_trace.log` inside `student_workspace/`.
3. Open `solution.json` in `student_workspace/` and perform the required modifications.
4. Save your changes (`Ctrl + S` or `Cmd + S`).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running `python run.py` locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks

TC1	solution.json exists and is valid JSON	4 Marks
TC2	Root cause correctly identified as database connection pool exhaustion	4 Marks
TC3	Primary correlation ID ('corr-9921') matched across logs	4 Marks
TC4	Failing microservice class and method line number mapped	4 Marks
TC5	Outage duration and impact metrics correctly calculated	3 Marks
TC6	Log evidence snippet included	2 Marks
TC7	Immediate recovery actions documented	2 Marks
TC8	Long-term architectural remediations included	2 Marks

Total Score: 25 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
